TECHNICAL PROJECTS

Senso | Braille Learning Hardware + Web Platform | Hornet Hacks 4.0

Python, Flask, React, Vite, Raspberry Pi | *Website* | *Github*

- Led a 6-person team to develop a braille learning product, defining the concept, lesson flow, and user experience
- Conducted market research, designed the interface, and iterated based on testing and feedback
- Architected the product across Raspberry Pi hardware, Flask APIs, and React frontend; coordinated technical integration
- Delegated work, resolved Git conflicts, and presented the final product independently; 1st Place – Open Innovation
- Translated user needs into lesson and interface decisions, balancing accessibility, learning goals, and constraints

Floora HEP Platform | Client-Based Senior Capstone Project

React, TypeScript, PostgreSQL, REST APIs | *App Store* | *Github*

- Contributed to end-to-end development of a real-client healthcare platform now deployed on iOS
- Designed the initial PostgreSQL schema covering ~80% of production tables and contributed to architecture decisions
- Implemented user-facing features across frontend, backend, and database layers
- Participated in sprint planning, code reviews, testing, and merge resolution as team integrator
- Collaborated with teammates to translate client requirements into technical features and user-facing workflows

Hand It Down | Student Materials Exchange Platform

React, TypeScript, Vite, PostgreSQL/Supabase | *Website* | *Github*

- Led a 5-person team to design and deliver a student materials exchange MVP within 48 hours
- Built user workflows including search, filtering, routing, form validation, and state management
- Collaborated on data modeling and REST API contracts; 1st Place – Sustainability
- Selected for the university Innovation Lab program to continue developing the product beyond the hackathon

LEADERSHIP & EXPERIENCE

SDG Japan | Yokohama National University

- Led ~20 international students in developing and delivering three sustainability workshops for ~25 Japanese daycare students
- Designed activities for a young audience and facilitated workshops in Japanese
- Adapted activities and communication for a Japanese daycare audience based on participants' age and learning needs

Physical Security & IT Intern | California State University Police Department

Jan 2026 – May 2026

- Supported IT and physical security operations across 20+ buildings, troubleshooting cameras, hardware, and security systems
- Built an interactive campus security map and coordinated a system-wide alarm audit across 20 departments

Interviewer | Population Research Center, Sacramento State

May 2025 – Sept 2025

- Conducted 2–5 bilingual interviews daily, gathering structured information while adapting communication to participants
- Maintained accurate records and produced documentation supporting daily reporting
- Built rapport with diverse participants while adapting questions and communication styles to gather accurate information

EDUCATION

B.S. Computer Science | California State University, Sacramento - May 2026

Relevant Coursework: Data Structures & Algorithms, Software Engineering, Databases, Data Visualization

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C, SQL, CSS

Frameworks: React, React Native, Spring Boot, Flask, Vite

Data: PostgreSQL, MySQL, MongoDB, Tableau

Tools: Git/GitHub, Jira, Agile/Scrum, REST APIs, Linux, Figma
